Address: Blk 11 Toh Yi Drive #08-377 SINGAPORE 590011

Nationality: Singaporean

Marital Status/Gender: Engaged, male

Date of Birth: 26 September, 1988

Profile

I am currently situated in Singapore working as a UI Developer at 8 Inc Singapore. Off-work, I work as a freelance Web Designer & developer with my own clients. I hope to seek for more working opportunities to further my career and broaden my horizons.

Equipped with various popular and common web programming languages, I lead organizations and individuals to move their business into the web market by designing and developing professional websites and user interface.

With excellent communication skills, I work closely with teams or individuals to accomplish and achieve goals set in the project, and producing quality work within the schedules.

Objectives

Technology nowadays allows us to build and create innovative, creative and interactive websites. In this time, we no longer serve static or dead pages to our users. Expectations increase as smart apps and lifestyle are adopted in our daily lives. We learn the behaviors and interactions from our users, and build interesting User Interface that actually allows our users to interact and create their own preferences. By doing that, we create a bond with our users, and eventually loyalty and support from them.

- To lead and develop excellent user interface and experience targeting the audience of the business.
- To add in valuable services and design directions that helps in projects.
- To gain exposures, knowledge and experience in understanding how different organizations, business or individuals needed different form of requirements, and tackling them.
- To be able to take part with an interesting team to design and develop in a big project. Collaborate, conduct and conceive a great piece of work and idea.

Experience

8 INC DESIGN STUDIO, MARCH 2011 TO PRESENT

8 makes things. Extraordinary things that change the way people think, feel and do. Things designed to add value. Things that create irrational loyalty. They are known for designing Apple Store, and has worked with some of the most successful and best loved brands and experiences in the world.

I was being approached to become a part of the Singapore office development team. Being the first and only developer, I helped 8 lead the development on big projects.

Citibank - 360 Pilot

I manage and lead the development of this project. Citibank provided their own team of developers under my wing and I would be delegating and planning on the development schedules and process.

Roles: Lead UI Developer. Managing the team and delegating proper workload to maintain efficiency. Communicating and delivering items and milestones to clients directly, and capable to provide valuable feedbacks on UI and directions.

Experience

SAF NAVY, APRIL 2010 TO JULY 2010

The Singapore Armed Forces not only helps to develop one's inner discipline and strength, but they also provide opportunities for individuals to show their talent. The Navy requires extensive calculations, graph plotting, assumption, predictions, etc. But how are they managing all these? By using the modern technology and capability, a dynamic system could potentially help these guys to make judgements and decisions quickly.

I was approached by my colleagues to see if it's possible to develop such a system. As an individual, I had to plan the infrastructure of the system and how it works.

Duty Analyst & Research Tool

The system has capabilities of predicting base on the data stored on the backend, calculate and tabulates different types of analysis that helps the officers to plan and decide when situation arises.

Roles: Lead Developer, user research. Analyze and understand the needs and requirements. Design and direct the user interface in which it's simple and clear to all types of users.

Freelance UI Designer & Developer, JUNE 2009 TO PRESENT

Off work, I was occasionally approached by referrals to help in giving UX directions, design guidelines and developing of websites or user interface. Freelancing allows me to be my own creative director and producer of the work. It also gives a vast range of exposures to different situation and skills gaining on-the-fly. Below are some of my bigger projects:

Sportball @ Singapore

A franchise of Canada's Sportball, where kids of young age participates in sports non-competitively. They needed a singapore version of the website, with various changes to its content using CMS, and a custom-made page where schedules of different programmes are listed. PHP, JS, CSS, MySQL.

CIDology - Portobello Web Application

A fully animated Web Application displaying different Architectural buildings constructed in the past months. Build purely with jQuery, HTML5 and CSS3. A colleague of mine approached me to design and create a web application for displaying Architectural projects he had deal with before. It will be a robust animated browsing experience, that focus mainly on delivering friendly user interface and smooth transitioning of screens.

Sportball Registration System - User Interface

Paper records, writing down notes and the likes were all olden days methods. Now, people want to bring such features and capabilities onto the web where everywhere and anyone have access to without physically being there.

Meng & Lam Trading - User Interface & Development

This is the first time Meng & Lam decided to go online. They saw the power and effectiveness of online and social networks, and they have found the right person to do it. I gave them constructive suggestions and guidelines on being successful online, and how to achieve positive results. Designing a unique website for them using their colors, I aim to position them as the first and highest influential trading company out there in the market.

Education

NGEE ANN POLYTECHNICS

- Major in Diploma in IT, FROM 2005 - 2008

After graduating, I have developed a strong interest in the web Design & Development industry. Since then, I have continuously self - studied on web programming languages, web design techniques, develop & improve skills on major software used in the market.

Skills

Programming Languages

PHP	Ajax	JQuery	JQuery UI	Jade	WordPress	Django
